

# RENEWABLE ENERGY SOLUTIONS

## Go Anywhere, Do Anything

Terramac rubber tracked carriers maneuver effortlessly over rough, soft, wet and steep ground conditions. Units are ideal for off-road solar, wind and transmission line projects, providing jobsite access where others can't. Easily customized with specialty support equipment, units deliver solutions for various tasks pertaining to site prep, installation, maintenance, and repair. Terramac models provide the energy sector peace of mind when it comes to safety, comfort, and efficiency on remote jobsites.

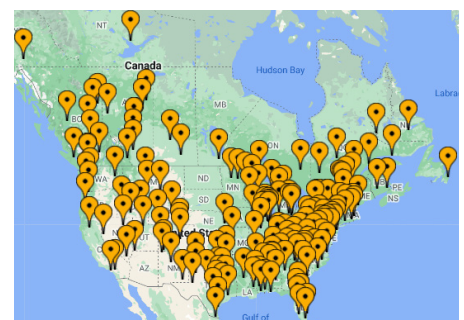

## Low Ground Pressure

When sensitive terrain prohibits wheeled vehicles from reaching remote jobsites, keep your crews working with rubber tracked crawler carriers. Terramac carriers exert low ground pressure, ranging from 5.3 - 8.3-psi for conquering steep slopes with ease. Enjoy improved productivity during multiple phases of the project including site investigation, installation, repairs and restoration.

## Dealer Network - Local & Responsive

Terramac is proud to provide a full-line dealer network which is the largest carrier sales, rentals, parts and service network in North America. Preventative Maintenance and Extended Warranty programs are available.

## STRAWBLOWING

Travels effortlessly through narrow passage ways while laying up to 7-tons of hay per hour for maximum effectiveness. Additional rails provide storage for up to 180 bales of hay minimizing the need to re-stock supplies mid-project.

## HYDROSEEDING

Accelerate site reclamation on various ground condition types with this powerful combination of low ground pressure carrier and hydroseeding unit. It delivers improved efficiency and control while maneuvering between rows for professional and quality seeding application.

## FIFTH WHEEL

Terramac's chassis is designed to give contractors peace of mind while working across challenging terrain. Difficult tasks are simplified such as transporting over-sized trailers, electrical transmission poles, stringing pipe and more.

## FLAT BED

Hauling mats and oversized material is simplified with the 360-degree rotating RT14R crawler carrier. Low ground pressure allows access to challenging terrain while 360-degree rotation enables dumping at any angle or on the go for maximum precision and efficiency.

## CONCRETE MIXER

Self-contained transit-type drum mixers allow for safe concrete transport for foundational structures. When working in remote areas or tackling jobsites with challenging ground conditions the low ground pressure of the rubber tracks makes hauling heavy loads of concrete effortless.

## DRILL RIG

When foundation work is required, depend on the reliability of a low ground pressure carrier with a powerful drill. Track mounted, with operator cab, this duo gets from site to site quickly and offers multiple drilling methods for various ground conditions.
