

NATURAL DISASTER EQUIPMENT SOLUTIONS

Emergency Management

Equip yourself for disaster mitigation and recovery with Terramac's versatile crawler carrier line. We offer a wide range of all-terrain carriers capable of accessing devastated terrain to provide site preparation, emergency response, utility repair, debris removal, and reclamation during emergency. Units may be customized with support attachments, many which can be interchanged, so contractors can prepare for whatever disaster strikes – storm, flood, fire, or earthquake.

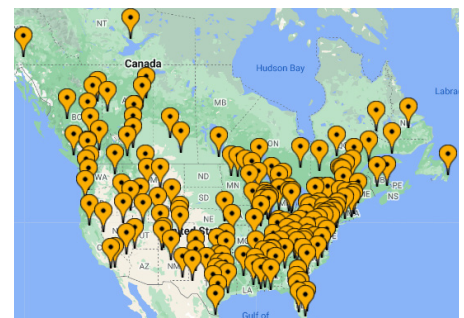

Low Ground Pressure

When access is critical, keep emergency crews working with rubber tracked crawler carriers. Terramac carriers exert low ground pressure, ranging from 5.3 - 8.3-psi fully loaded, for reaching sensitive, wet, and uneven terrain with ease. Rest assured that our carriers will get you where you need to be when risk is high, and needs are urgent.

Dealer Network - Local & Responsive

Terramac is proud to provide a full-line dealer network which is the largest carrier sales, rentals, parts, and service network in North America. Preventative Maintenance and Extended Warranty programs are available.

NATURAL DISASTER EQUIPMENT SOLUTIONS

DUMP BEDS

Hauling material and debris is fast and efficient using one of our standard or rotating dump beds. These multi-purpose units offer varying capacities, for preemptively building mitigation structures or clearing debris during recovery.

HOOKLIFT

Enhance productivity by using a single unit to perform multiple disaster preparations and response tasks. Our hooklift unit allows you to change bed styles, containers, specialty equipment, and tool cribs with ground level loading and unloading, all from within the cab.

AERIAL LIFTS

Tracked aerial lifts provide safe access for utility workers performing powerline repair. Featuring an extended frame and an advanced hydraulic pump drive configuration, these tracked carriers boast both power and stability for swift emergency response.

DIGGER DERRICKS

Quickly restore power with a rubber tracked digger derrick that reliably accesses challenging terrain. This unit provides all the tools necessary for digging holes, lifting, and setting poles, turning screw anchors, and setting transformers, so you are ready to respond on a moment's notice.

VACUUM EXCAVATOR

Accelerates powerline repair by easily maneuvering over some of the most difficult jobsite conditions. Equipped with 5200 CFM, this unit quickly locates underground utility lines so new poles and lines can safely be set.

PERSONNEL CARRIERS

Depend on Terramac personnel carriers for providing crews safe and reliable transportation to and from disaster areas. Cabins hold between 10-25 personnel, along with tooling for quickly dispersing teams across projects.
